8.3 Misrepresented Data

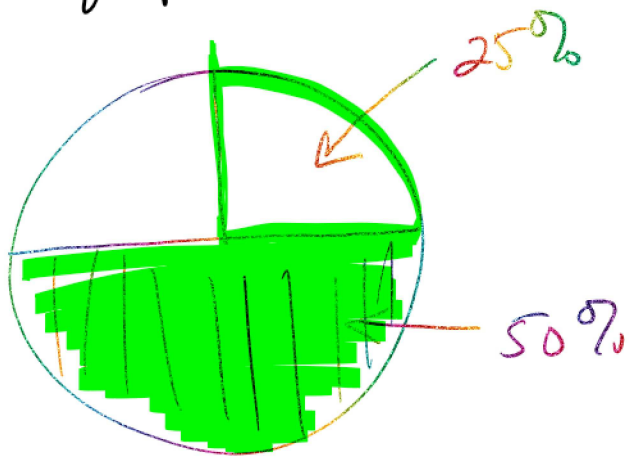
When a survey is biased, it does not represent the population.

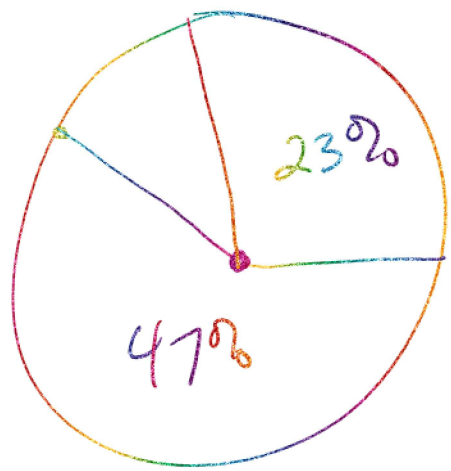
Info/data collected is often changed to a graph and the graph could be misleading.

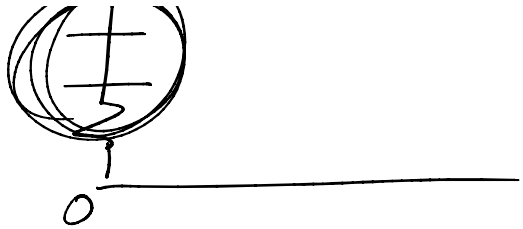
To be a proper graph, it must have:

- title
- axis labels, all sections labelled
- all pictures are the same size.
- an appropriate scale
- equal spacing on axis

p 256 graphs ex







8/9

$$\frac{43147}{4} = \square$$

9/10

$$\frac{43346}{4} = \square$$

to march 2013

$$\frac{47500}{40} = \square$$
