Name: $\qquad$ Period: $\qquad$

1. Determine two coterminal angles (one positive and one negative) and the reference angle for each given angle.

| a. $\theta=290^{\circ}$ | b. $\theta=-200^{\circ}$ |
| :--- | :--- | :--- |
| c. $\theta=520^{\circ}$ | d. $\theta=-490^{\circ}$ |

2. Determine the quadrant in which angle $x$ lies.

| a. $\sin x<0$ and $\tan x>0$ | b. $\cos x>0$ and $\tan x<0$ |
| :--- | :--- |

3. The point $P(-9,-12)$ is on the terminal arm of angle $\theta$. Find $\sin \theta, \cos \theta$, and $\tan \theta$.
4. If point $P$ is on the terminal arm in standard position making angle $\theta$, which is in the fourth quadrant, and $\sin \theta=-\frac{3}{\sqrt{10}}$. Determine the possible coordinates for $P$, and Find the other two trigonometric ratio for $\theta$.
5. Solve for the missing sides of the triangles. Express your answer in exact value.

6. Find the values of $\theta$ for $0^{\circ}<\theta \leq 360^{\circ}$.

| a. $\sin \theta=-\frac{1}{\sqrt{2}}$ | b. $\tan \theta=\sqrt{3}$ |
| :--- | :--- |

7. Solve for $\theta$ to the nearest degree, if $0^{\circ} \leq \theta<360^{\circ}$.

| a. $\cos \theta=-0.7515$ | b. $\tan \theta=-0.8642$ |
| :--- | :--- |

8. If the terminal arm of an angle $\theta$, lies on the line $4 x-2 y=0$, for $x \leq 0$, determine the exact value of $\sin \theta+\cos \theta$.
9. Solve the triangle.

10. Solve for angle C .

| a. $\angle A=48^{\circ}, a=4$, and $c=5$ | b. $\angle A=39^{\circ}, a=28$, and $c=41$ |
| :--- | :--- |

11. An observer on the ground looks up to the top of a building at an angle of elevation of $30^{\circ}$. After moving 50 feet closer, the angle of elevation is now $40^{\circ}$. Find the height of the building.
12. Solve the triangle.

c.
13. Two people started walking from the same point, at the same time; the walkers diverge at an angle of 110 degree. If one walks at rate $3.5 \mathrm{~km} / \mathrm{h}$ and the other at $2.6 \mathrm{~km} / \mathrm{h}$. Find the distance between them after 4 hours.
14. Two ships leave port at 4 p.m. One is headed at a bearing of N 38 E and is traveling at 11.5 miles per hour. The other is traveling 13 miles per hour at a bearing of $S 47 \mathrm{E}$. How far apart are they when dinner is served at 6 p.m.?
15. A straight line tunnel is to be constructed through a mountain between points $X$ and $Y$ in the diagram below.

Naturally, locations $X$ and $Y$ are not visible from each other, and with the mountain in the way, it is impossible to measure the distance between the two points. However, a third point, $Z$, is located from which both $X$ and $Y$ are visible, and for which the distances and angles indicated in the diagram are measured. Compute the required length of the tunnel.

16. Find the measure of length $D E$ to the nearest unit.

17. Find the measure of angle $A$ to the nearest tenth.
