6. a)

b) The days when he drove 0 km are unusual. These are probably his days off.

c) The graph is a fairly good representation of the data. You can see his maximum and minimum daily driving distances, and you can get a general idea of the range in which his driving distances usually fall.

7. Thérèse was driving her car from 8:00 am until 10:00 am. It was parked from 10:00 am to 12:00 pm, at which time she put gas in the tank. Thérèse then drove for an hour (until 1:00 pm) and stopped again for an hour until 2:00 pm. Between 2:00 and 4:00 pm, she drove again, and she stopped for the last hour.

b) approximately \$325.00

c) between \$300.00 and \$325.00

9.

b) The number of cell phones bought fluctuated greatly from month to month, but overall, there seems to be an increase in purchases over time.

c) No, there is no real relationship between the number of cell phones purchased and gender. In some months, females bought more, and in other months, males did.

d) It is not very useful. A stacked bar graph or a bar graph would better indicate the numbers sold.

10. a)

- b) Stock A started off high and made a sudden drop in August and September. It increased again over the next few months and then dropped in March.

Stock B prices fluctuated slightly over the year but remained relatively even compared to Stock A.

- b) Her spending on groceries increased over the 6 weeks.
- c) The vertical axis starts at \$19.50 rather than \$0.

- b) The second graph is a better representation because more years are represented.
- c) about 61%
- d) about 1952
- e) about 17%

PRACTISE YOUR NEW SKILLS, p. 76

- c) With the exception of the two low weeks (weeks 5 and 9), the number of steps generally increased per week.

There is no general trend of increase or decrease in the data. However, if one year was high, the following few years tend to be lower. There were a lot of hectares of forest burned from 2002 to 2006.

3. Answers will vary. At the beginning of the year there was a steady rise in prices, but from June to August they dropped. Prices remained about the same from August to September, then rose again until the end of the year. The highest prices were in December.
