## 3. 2 Molar Solubility

## 1. Think of molar solubility as molarity of a saturated solution!!

Example: 0.49 g of $\mathrm{AgBrO}_{3}$ is required to saturate 250 mL of water. What is the molar solubility of $\mathrm{AgBrO}_{3}$ ?

Example: $\mathrm{AlF}_{3}$ has a molar solubility of 0.0665 M . How many grams of $\mathrm{AlF}_{3}$ will dissolve in 1 L?

## 2. Dilution Calculations

Use the formula: $\quad \mathrm{C}_{1} \mathrm{~V}_{1}=\mathrm{C}_{2} \mathrm{~V}_{2}$
(initial conc.) $x$ (initial volume) $=$ (final conc.) $x$ (final volume)
Example: Suppose you have 300.0 mL of 1.2 M HCl . How much water do you need to add to dilute it to 0.50 M HCl ?

Example: You have 145 mL of a $8 \mathrm{M} \mathrm{HNO}_{3}$ solution. What is final concentration after adding $650 \mathrm{~mL} \mathrm{H} \mathrm{H}_{2} \mathrm{O}$ ?

## 3. Concentration of Individual lons

$\mathrm{MgBr}_{2}(\mathrm{~s}) \quad \mathrm{H}_{2} \mathrm{O} \longrightarrow \mathrm{Mg}^{+2}(\mathrm{aq})+2 \mathrm{Br}^{-}$(aq)

Example: What are the concentrations of ions in a $1.5 \mathrm{M} \mathrm{Fe}_{2} \mathrm{O}_{3}$ solution?

Example: 8.5 g of $\mathrm{MgCl}_{2}$ is dissolved in 2.0L. What is $\left[\mathrm{Mg}^{+2}\right]$ and $\left[\mathrm{Cl}^{-}\right]$?

Example: 500 mL of $0.8 \mathrm{M} \mathrm{Li}_{2} \mathrm{CO}_{3}$ is mixed with 500 mL of $0.5 \mathrm{M} \mathrm{BeF}_{2}$. Find concentration of all ions!
