

## Glossary

### Chapter 1

<b>aggregate</b>	the total amount—such as the aggregate level of output (p. 3)
<b>bads</b>	items that we do not desire or want (p. 10)
<b>capital</b>	the equipment and structures used to produce goods and services (p. 10)
<b>causation</b>	when one event causes another event to occur (p. 6)
<b>ceteris paribus</b>	holding everything else constant (p. 5)
<b>comparative advantage</b>	occurs when a person or a country can produce a good or service at a lower opportunity cost than others can (p. 18)
<b>correlation</b>	two events that usually occur together (p. 6)
<b>economics</b>	the study of the allocation of our limited resources to satisfy our unlimited wants (p. 1)
<b>efficiency</b>	getting the most from society's scarce resources (p. 20)
<b>empirical analysis</b>	the examination of data to see if the hypothesis fits well with the facts (p. 4)
<b>entrepreneurship</b>	the process of combining labour, land, and capital together to produce goods and services (p. 10)
<b>fallacy of composition</b>	even if something is true for an individual, it is not necessarily true for a group (p. 7)
<b>goods</b>	items we value or desire (p. 10)
<b>human capital</b>	the productive knowledge and skill people receive from education and on-the-job training (p. 10)
<b>hypothesis</b>	a testable proposition (p. 4)
<b>labour</b>	the physical and mental effort used by people in the production of goods and services (p. 10)
<b>land</b>	the natural resources used in the production of goods and services (p. 10)
<b>macroeconomics</b>	the study of the aggregate economy including the topics of inflation, unemployment, and economic growth (p. 3)
<b>marginal thinking</b>	focusing on the additional, or incremental, choices (p. 14)
<b>market failure</b>	when the economy fails to allocate resources efficiently on its own (p. 21)
<b>microeconomics</b>	the study of the smaller units within the economy including the topics of household and firm behaviour and how they interact in the marketplace (p. 3)
<b>negative incentives</b>	incentives that either increase costs or reduce benefits resulting in a decrease in the activity or behaviour (p. 17)
<b>net benefits</b>	the difference between the expected marginal benefits and expected marginal costs (p. 15)
<b>normative analysis</b>	a subjective, biased approach (p. 7)
<b>opportunity cost</b>	the highest or best forgone opportunity resulting from a decision (p. 12)
<b>positive analysis</b>	an objective, value-free approach, utilizing the scientific method (p. 7)
<b>positive incentives</b>	incentives that either reduce costs or increase benefits resulting in an increase in the activity or behaviour (p. 17)
<b>price controls</b>	government mandated minimum or maximum prices (p. 21)
<b>resources</b>	inputs used to produce goods and services (p. 1)
<b>rule of rational choice</b>	individuals will pursue an activity if the expected marginal benefits are greater than the expected marginal costs (p. 14)
<b>scarcity</b>	the situation that exists when human wants exceed available resources (p. 9)
<b>service</b>	an intangible act that people want (p. 10)
<b>specializing</b>	concentrating in the production of one, or a few, goods (p. 18)
<b>the economic problem</b>	scarcity forces us to choose, and choices are costly because we must give up other opportunities that we value (p. 1)
<b>theory</b>	an established explanation that accounts for known facts or phenomena (p. 4)
